Energy transition – the largest capital reallocation in history

Energy transition – the largest capital reallocation in history is the third topic for discussion in our four-part Green Infrastructure podcast series.

In the latest episode, Aztec Group's Ed Bellew is joined by Low Carbon founder and Chief Executive Roy Bedlow.

During this episode, they discuss:

- The energy transition represents the largest and fastest capital reallocation in history, with $37 trillion of investment required through to 2030.
- Further advancement in proven renewable energy technology is creating new generation opportunities, in battery storage and next generation solar panels.
- The energy transition is offering exciting investment opportunities for private market investors, by blending technology and sustainability to deliver returns.
