Aztec Group appoints Jing Wang as Head of AI to establish new AI Technology & Enablement team

Key highlights:

- Jing Wang appointed Head of AI
- Joins from JPMorgan Chase, where she was Head of AI Products for Chase UK
- Previously held a senior AI and machine learning leadership role at Amazon Web Services
- Will establish a new team driving responsible AI adoption across Aztec

Aztec Group has appointed Jing Wang as Head of AI, reinforcing its commitment to purposeful investment in technology, data and AI alongside deep private markets expertise and exceptional client service.

Jing will build and lead Aztec's new, multidisciplinary AI Technology & Enablement team, focused on where machine learning and AI can create genuine value for clients and colleagues, while maintaining rigorous standards of governance, control and security. In her role, Jing will lead the development and delivery of Aztec's artificial intelligence strategy across the Group, working with technology, product and operations colleagues to embed AI into core operations and improve the client experience.

Jing joins Aztec from JPMorgan Chase, where she served as Head of AI Products for Chase UK. There she was responsible for developing the bank's generative AI capabilities and the guardrails required to bring AI solutions safely into production, working across executive leadership, technology and operational teams. Before JPMorgan Chase, she held a senior AI and machine learning leadership role at Amazon Web Services, developing enterprise AI solutions for regulated industries, including financial services, with a focus on large-scale document and knowledge processing across multiple jurisdictions and languages.

Jason Adams, Chief Technology Officer at Aztec Group, said: "Private markets clients are increasingly looking for partners that can combine exceptional service

with technology that delivers real operational value. AI has enormous potential, but success depends on applying it in ways that are aligned to client needs. Jing has deep technical expertise, product leadership and experience building AI solutions at global scale within highly regulated environments."

Jing Wang said: "What drew me to Aztec was its belief that technology should strengthen, not replace, the expertise and relationships clients value most. In private markets, value is built on accuracy, judgement and trusted partnerships. AI is most effective when it helps take the weight of routine work away from specialists, allowing them to focus on the insight and advice that make the greatest difference. I'm excited to be joining at this stage in Aztec's growth and look forward to helping shape that capability and its value for clients."

Jing's appointment continues Aztec's investment in technology, data and its people. As private markets continue to evolve, the Group remains focused on building the capabilities, leadership and technology needed to help clients navigate complexity, operate at scale and achieve their long-term ambitions.

The appointments follow a series of strategic leadership hires as Aztec continues to invest in leadership, expertise and operational excellence, including Benjamin Lucas as Chief Executive Officer, Melissa Ferraz as Chief Commercial Officer, Jason Adams as Chief Technology Officer and Sangjune Park as Chief Architect and Data Director.
